

Claims

1. A system for providing information for users of mobile terminals, the system **comprising**

5 - a first data storage in a mobile terminal, the first data storage being adapted to store information,

 - at least one remote data repository connected to a telecommunications system for storing personal content including data objects and/or information extracted from said objects, whereby at least one of the repositories is assigned for the use of each mobile terminal,

10 - a second data storage including external data, the system further comprising i) a first communicator adapted to retrieve from said remote data repository data including an object and/or information extracted from an object, ii) at least one predetermined criterion, defining a relationship between the retrieved data and said external data, iii) an analyzer, adapted to analyze
15 whether said relationship fulfills a predetermined condition, and iv) a selector responsive to the analysis means, adapted to select data to be delivered to the mobile terminal when said condition is met, and

 - a second communicator responsive to the selector means adapted to deliver the selected data to the mobile terminal.

20 2. A system according to claim 1, the system further **comprising** an accessor to an external network for retrieving said external data.

 3. A system according to claim 2, **wherein** said external network is the Internet.

25 4. A system according to claim 1, **wherein** the external data is retrieved from an external network to which the data repository is operationally connected.

 5. A system according to claim 1, **wherein** items i), ii), iii) and iv) are located in a computer.

30 6. A method for providing information for mobile users, the method **comprising** the steps of

 - storing information in the mobile terminal,

5 - connecting at least one remote data repository to the telecommunications system, storing therein information including personal content including data objects and/or information extracted from said objects, the remote data repository being provided with means for accessing the information from at least one terminal,

 - assigning at least one of the repositories for the use of each mobile terminal,

 - storing external data,

10 - retrieving from said remote data repository data including an object and/or information extracted from an object,

 - reading at least one predetermined criterion, defining a relationship between the retrieved data and the external data,

 - analyzing whether said relationship fulfills a predetermined condition,

15 - in response to the analyzing step, selecting data to be delivered to the mobile terminal when said condition is met, and

 - delivering the selected data to the mobile terminal.

7. A method according to claim 6, the method further **comprising** the step of accessing an external network for retrieving said external data.

20 8. A method according to claim 7, **wherein** said external network is the Internet.

9. A method according to claim 6, **wherein** the external data is retrieved from an external network to which the data repository is operationally connected.
